

NEW TECHNOLOGIES

V. NESNOV

Doctor Technological and Organizational sciences

Abstract: I am glad that I am living in the country where so many persons who would like to be by the President and provides the best development of the country. Any development is process of the creation of better technology and always needs in the united of knowledge several sciences. In the century of the technical progress scientists created "Theoretical Physics", "Theoretical Chemistry" and some other. In the technological century/ the century of the technological and intellectual progress/ the scientists of the USA created new science "Theoretical Technology". That is why necessary from the position of knowledge of new science to attract your attention to some peculiarities of the modern condition of the country as human-technological super-system and wish you the good successes.

[V. NESNOV. **NEW TECHNOLOGIES**. *J Am Sci* 2024;20(4):13-19]. ISSN 1545-1003 (print); ISSN 2375-7264 (online). <http://www.jofamericanscience.org>. 04. doi:[10.7537/marsjas200424.04](https://doi.org/10.7537/marsjas200424.04).

Keywords: President; development of the country; knowledge; science; Theoretical Physics; Theoretical Chemistry; human-technological; super-system; successes.

Respected the Nominees to the President,

I am glad that I am living in the country where so many persons who would like to be by the President and provides the best development of the country. Any development is process of the creation of better technology and always needs in the united of knowledge several sciences.

In the century of the technical progress scientists created "Theoretical Physics", "Theoretical Chemistry" and some other. In the technological century/ the century of the technological and intellectual progress/ the scientists of the USA created new science "Theoretical Technology". That is why necessary from the position of knowledge of new science to attract your attention to some peculiarities of the modern condition of the country as human-technological super-system and wish you the good successes.

This super-system has some dynamic and any dynamic system has technology. Every technology is materialized knowledge of some sciences and it has a quality. The quality of technology depends on the volume and depth of the creative intellect which was materialized in it and determines the meanings of all indicator's groups of the super-system: educational, industrial, agricultural, cultural, economic, informational, juridical, social, political, and others. All technologies of the super-system can be classify according to their allocation at two groups: creative and service. "Theoretical Technology" unites all knowledge of different sciences in one technological system of the knowledge and classifies all sciences according to allocation of their knowledge at: the creative/math, physics, chemistry, all technical and other exact sciences/ and service sciences/information, juridical,

economics, social, political and some others/ [2]. Any technology is materialized system knowledge of the some creative and service sciences.

The increase of the creative intellectual potential in the creative technology means improvement of it quality and development of the system. Analogical process in the service technology means improvement only of the quality of the service. The Government System had no of necessary knowledge of the new science and created some mistakes and refusals in the technological quality of functioning system [2]. The actuality of this article can explain else than that majority part of the Nominees have service intellect and line thinking and will be detrimental as the President, according to their thinking in own speeches, if obsolete technology of the election and management allows somebody from them occupy this place.

The country never was in so bad condition as can see in current time.

1, The intellectual conquest of the System by the other countries has enormous successes [1]. Inside market of the country filled by the goods of the creative intellect of the foreign businesses although more part of them have worse quality but cheaper. Analogical goods of own businesses don't hold competitive fight even at inside market. The Government System have accustomed already own population to the worse quality of the goods although American quality of the goods always was the best in the world. But now IQ of population of the country occupies about 20 place among other countries in the world and equal 98. The service technology of the management in the super-system was hold up the own development and allowed to others countries to catch and overtake of our country

in the level of the development. The country can't make the reform of the educational system about 50 years and so countries as Japan, Germany and some other could create better level of the development and IQ of own population. Nobody of the Nominees has of the sufficiently knowledge of new science to make the creative technology of the management, even don't know rank structure of the country's problems but every of the Nominees would like to use obsolete service technology of the management and sees only some its surface problems. Some of them have so level of the service intellect which doesn't allow them even understand that our country is only one of the elements in the common system of the interaction of other countries of the world, that it interaction always has different level, that optimal order of interaction and development in the world can provide only our super-system, having the best conditions for the own development if it will have creative technology of the management.

Even about 50% of cars in our country are cars of the foreign creative intellect. The process of the sale of the real estate for the foreign businesses already reached enormous sizes and became dangerous for the reliability of the monetary manipulation. This process is approaching to the critical conditions very quickly.

2. The technological quality of the functioning super-system and its monetary manipulation is degrading instead of the development and some states will begin to say about independent very soon because human-technological system is going to the destruction [2]. The country was created by the intellect of the lawyers and economists who have created the best Constitution in the world 200 odds years ago. This intellect was better in the country what had only start of the development by the way of the creation new more production machines. But Great H. Ford has created the first conveyer in 1922 and creative businesses have moved from technology of the technical progress to the technology of the technological progress. The country began to change into sufficiently complex human-technological super-system functioning according to constantly changing technological quality.

The country is changing in the own development but the juridical and economical knowledge have stayed by the main in the technology of it functioning. The created technology of functioning system was effective at one time but constantly developing country needs in the more creative intellect and more perfect technology of the management. The lawyer and economists couldn't understand it and the technology of the management little by little was turned in service instead creative technology. Later the lawyers and economists already had not sufficiently intellect to make the creative technology of the management but continue to manage. They couldn't already make diagnosis of the

technological quality of the super-system to use it results for the creation united technology of functioning for the development of the country, as common purpose, because the world's countries began competitive fight and any business became only some element of common technological system of every country. In our country every business continue has competitive fight alone. Naturally, so functioning of our super-system is delaying the development of country and every of businesses loss a profit. Especially they began loss size of profit when other countries to catch up and overtake our country in the own development and their technological systems were prepared better to the competitive fight at the inside market of our super-system and began intellectual conquest of it. After the back of every foreign business was standing all technological system of their country and every our business had the fight as alone even at the own inside market. Every business is fighting as it can. The loss of the profit of businesses to developed in the damages of the country which began to increasing very quickly. But even in this case the Government System couldn't create optimal for the development country the technological system of the taxes, optimal complex of the problems of the development, optimal complex of the actions and optimal reforms and others [3]. However, the persons of the Power don't want to understand it.

The technology of the monetary manipulation became detrimental for the own population. The prices is increasing quicker than wages, processes of the inflation is going constantly. The Government system has enormous debt and only percentages according to this debt are more than collective budget of some European countries. The money for it the Government System takes from budget of our country. It means that some part of the population already long time is working for the interests of other countries. So part is constantly increasing and super-system is approving to the critical conditions. Naturally, the social stratification of the society and social tension is increasing very quickly.

Now the country has created new science and has knowledge to make diagnosis of the technological quality of the functioning super-system, create optimal structure of the management, optimal system of the problems and actions to stop the degradation of technological quality of country and it monetary manipulation, change of these technologies to the development, create unite optimal technology providing the best profit for the businesses and country, allowing reduce the debt country in the maximum short time, constantly improve the life of the population. But for it necessary have creative technology of the management. The economists and lawyers have service intellectual potential and insufficiently of the

technological knowledge [3]. Only so can explain the modern condition of the technological quality of the country and monetary manipulation, although super-system has all possibilities: high intellectual potential for optimal quantity of population, mineral resources, knowledge of new science to be the best in the world.

3. The main contradiction in the super-system is contradiction in the technological quality of the Government System and country. In current time the super-system is finishing already work out of the resource of arise line of the normal law of the distribution of the resource technology of the technological progress and many businesses are trying to go to technology of the intellectual progress to use advantages of new technology. However, the Government system is continuing uses obsolete many years ago service technology of the technical progress which became detrimental for the country. It created already the crisis in last century, technological refusal in the beginning of this century, delayed the development of the country, change the quality of technologies of its functioning and monetary manipulation from the development to the degradation, helped to arising of the different negative processes. The Government System continues don't understand what is happened in the country and can't offer something rational, although negative processes are increasing. Why?

3.1 The effective management by the technological quality of the country can be if the Government System will have creative technology of better quality than it has super-system. But for it persons of the Power have to have creative intellectual potential higher level. Necessary say, that usually the intellect of the lawyers, economists and other persons of the service intellect has some creative part too but it is below than persons who graduated from the technological universities and improved their mind for the creative job, because very often abilities of the first are insufficiently for the studying of the creative of the sciences and so persons can study only service sciences. The US is especial country in which lawyers, economists had the best conditions life during all times because their intellect has created the country, although it was very long time ago. That is why some persons of this profession can have sufficiently high natural intellect, but it is very seldom may be according to the technological knowledge. For example, B. Clinton has the best IQ among all after Second World War the Presidents of the country equal 182. However, some the Presidents had IQ equal 92 and 93.

The country changed but lawyers and economists believe that they have sufficiently intellectual potential for the management so complex human-technological system in the technological century when the quality of

the technology determines all meanings of indicators and the management was changed in the technological system. Unfortunately, doesn't every person of the management knows and understands what is it means "quality of the technology" and system management. At once creating technology of the management continues functioning to current time and in the country there is not organ which can changes it already long time. The legislative organ what has sufficiently Power for it according to the Constitution of the country consists from lawyers too in majority part and creates one mistake after other, according to the level of the technological knowledge. Using technology can't use all advantages of our system and creates for the country some damages but continues functioning.

The Power uses political parties inside country to try to convince the own population that together with next the President the life in the country will better, although technologies are remaining and persons of the Power wouldn't like to change something in the technological quality and can't do it according their intellect. The leaders of the political parties have service intellect, as usual, too.

According to the knowledge of "the Theory of the human-technological systems" the persons of the service intellect have worse moral-ethic quality than analogical persons of the creative intellect in majority cases. That is why, in the system of the Power can arise conditions for the using power in the personal interests. As can be effective person at the place of the President of the country if he has service intellect and his IQ equal 92 or 93 that is below than middle IQ of the nation? Even the parents can manage by own children so long until children are needing in their knowledge and help. Naturally, so persons couldn't give necessary creative knowledge for the development of country.

3.2. The scientists administrated already 40 odds years ago that every problem of the management is technological problem and for its optimal solution necessary use diagnosis of technologies of super-system and of this problem and its quality. The technological knowledge is necessary for it and only service knowledge will insufficiently. Any place in the Government System has different of the intellectual level the problems for the solution and every of persons have some creative intellectual potential. That is why the person of every place will effective if his creative intellect higher than creative intellect of the problems what he has to decide. Than higher place in the structure of the management than higher creative intellect of his problems and this person has to have sufficiently reliable level of the knowledge to provide optimal solution. The solution of all problems has to be united by common object- by the development of the country according to the main requirement of the

Commented [VN1]:

Constitution of the country. However, nobody in the country knows today even critical, according to efficiency, intellect of the place of the President, congressman, senator, governor.

Last 35 years the country had and continue has 5 the Presidents with IQ accordingly: 105, 93, 182, 92, 139, although middle IQ of population equal 98. Naturally, the scientists of the psychologist have service intellect too and they couldn't create scales for the measuring of the depth thinking because it is more complex technological problem and for its solution necessary use knowledge of the other sciences yet. This problem can has the solution. Creating scales of the measure the erudition of the person more than depth of his thinking and the using some of them allow receive so approximate meanings sometimes that person can has a smile.

Necessary say, that every from 5 the Presidents had or have service intellect, although the quality of the technologies of their management can be measured by the creative intellectual potential. That is why they couldn't manage by the technological quality of the functioning country, by its development, and their knowledge was sufficiently only for the management by "the economic development". What does it mean?

The human-technological system consists from many different systems: educational, industrial, agricultural, cultural, medical, economical, juridical, information, taxes, social, ..., political. Every so system are only element in the super-system and has own technology of the functioning and it quality. Today quality of every technology we can measure only by meanings of the group of its indicators and every technology has own group so indicators. These indicators can be better or worse but they can't have the development, because they are only indicators. Only super-system can has the development or degradation. The improvement of the quality any of these technologies will improve the meanings of indicators of this technology, although every of them has different influence at the quality of all super-system, according to the structure. That is why for the effective functioning of every technology necessary that system of the management has to have technological knowledge for the improvement of the technological quality of the country. All systems united in the super-system by along purpose- the development of the country. In this case impossible even say the "educational development", "industrial development", "market development", "juridical development", "economic development" and any other development because in this case is in view only the improvement some groups of the indicators, although nothing know about their influence at the technological quality of all super-system. It is elementary the substitution of the conception "Development" and it exist. Besides, the economic system is only service system in the super-

system and manage only "economic development" is impossible. If the Government System sad that it manages "economic development" of the country than from this follows that it manages by nothing and only takes control of the results of the some events, although is trying creates so effect and is hanging up at the public conscience that it is managing.

So conceptions as "economic development" "economy of the country", "economical potential" and some other haven't exist and only defect technological knowledge[3] and wild inclination to the Government System allowed by the economists to hang up at the public conscience this conceptions. Service intellect of the lawyers, economists can't effective manage by the technological quality of the super-system. It can manages only "economic development" of the country. Besides, economic indicators are result of the service of the interest of interaction of the businesses, population in the functioning system, although the representatives of the economic sciences long time called some technological indicators as economic indicators and used all possibilities to hold up the development of the technological knowledge [1]. Economic technologies, sciences, knowledge are service in the human-technological system because they can create nothing beside crisis, but always service some technologies of the interaction and is only one of the aspects of the technological knowledge. The defect of the technological knowledge helped to economists create and use detrimental for the development country and its population technology of the monetary manipulation and other negative processes.

3.3. Nobody from five the Presidents made diagnosis of the technological quality of the super-system to create optimal system of the problems and actions of the Government system, optimal for the development country technological system of the taxes and every the President have management according to the own opinion of his service intellect.

The first of them made sufficiently much for the safety country and increasing democracy in the world interactions of the different countries. Together with this he increased debt of the country about 3 times and to the finish of the own management put in the technological quality of the country "to mine of slowly actions" when he has abrogated the state regulation of the prices at the oil goods. So solution created the possibility for oil industry has more size of the profit, but it is reduced the competitive ability and size of the profit for the industrial businesses. The industrial businesses had always the main creative intellectual potential of the nation and provide it development. The interests of the resource businesses became higher than interests of the development country for the Government System. The prices began increasing and

industrial businesses start to move from our country to the underdeveloped countries where the Government systems created more effective conditions. By the way the Government System of our country created sufficiently strong country-competitor, retard development of own system, transited the quality of technology of it functioning from the development to the degradation. This solution has broken off the technology of the development country and interests of the underdeveloped oil countries, determining the world oil prices, increased own influence at the future of our country. The potential of the creative intellect, materializing in the different technologies, equipment, and creating by the population of the country began to job at the interest of others countries. The rates of the degradation of the technological quality of functioning system and its monetary manipulation began to increasing very quickly.

Next by the President was the representative of this party too. But the low intellectual potential/IQ equal 93/ of the service intellect didn't allow him to stop negative processes in the technological quality of the country and he could use the President Power only one period.

After it by the President of country became the representative other political party with IQ equal 182 and service intellect. During of all two periods of his Power he tried to stop all negative processes in the system which were created before him and continued increasing. Unfortunately he hasn't necessary technological knowledge and could only reduce the rates of the negative processes.

The forth President was by the representative of the first political party too. He had service intellectual potential with IQ equal 92. Naturally, all negative processes were increasing velocity according to the time of the Power of this person. Besides, together with the legislative organ of the country he has organized the "empty" for the interests of the country the war in which American fellows were killed. His mind was insufficiently to think about future of this dangerous region, if he allowed to the country to interfere in the technology of its functioning and the life of the population to make second step to the creation of the rational technology of the development in so region. As one of the results of this war was promote some part of the human-technological system to the creation of the "wild" state and the US takes part in the fight with this state now. Some part of the population of this region was returned in the migrants to the European countries and created additional problems. Other problems were created too.

About fifth the President was written sufficiently [5]. However, defect technological knowledge allowed him create reforms of the medicine service instead reformation of the educational system, although it level

was only the first step to the transit to the creative technology of the management. However, our President had moment too, when population could think that his defect technological competence borders on personal interests.

Such way three persons of the Republican party/IQ equal accordingly 105, 93, 92/ and two persons of the Democratic party/IQ equal accordingly 182, 139/ during 35 years managed by the country. Results of so management can see in the shopping where the prices increased in two and more times. The representatives of the first party had so strong mistakes that representatives of other party don't always could to correct them. Necessary say, that the first person by the using of the Power could create "Thank you" for yourself from the oil businesses, bank system and leaders of some underdeveloped countries, third person of this party created only "Thank you" from war industrial, oil businesses and bank system. All mistakes/ big and small/ were created for the worsening of the technological quality of the human-technological system. During of all time the bank system have ignored even elementary technological knowledge. As result the purchasing power of American dollar was considerable reduction, technological quality of the monetary manipulation transited from the development to the degradation. In technological century the economists have not sufficiently creative intellect to effective manage by the technological quality of the monetary manipulation inside country and outside markets. These years showed that leaders of the first political party insufficiently understand that only the best of the development country can provides the better profit for country, its businesses and life of the population, if the Government System can creates optimal for the development of country technological system of the taxes and creative technology of the management. Unfortunately, so leaders created conditions when authority of this party will reducing inside of the country very quickly and even the considerable expenses at information service its interest can't help effectively. The best way is necessary changes in the technology of the own job by the increasing of the creative intellect in the party system of the management.

Now our super-system is functioning alike the home in which service personnel/ intellect of lawyers, economists, and other specialists of service intellect/manages by the householder/ creative intellectual potential, providing the development of the country/, at the base only subjective opinions of the using level of the service intellect.

That is why this election have especial meaning for the future of our country because any fall has the bottom. Every of you must understand the weight of the responsibility which you would like to take for own

head. Unfortunately, some of you have already experience of the using in the obsolete detrimental service technologies of the management or was busing in the service businesses and you already can't transit to creative technology of the management. Possible, that some of the representatives of the first party have no sufficiently creative intellect for it as it was before you. Unfortunately, legislative organ couldn't prepare this process sufficiently good and population even don't know IQ of every of the Nominee, critical IQ of the place of the leader of super-system but have to elect in blind, according to words only.

4. "All legislative powers herein granted shall be vested in the Congress of the United States..."The Constitution of the United States, Article 1/. The basic belief of the Preamble is that our Government is a government "by the people. All function of the Congress have one main direction: the improvement of the life of its own population through the country's development.

Before it we have the possibility to understand that the development of the country is process of the improvement of the quality's technology of its functioning, that so conceptions as: sport development, educational development, juridical development, medical development, economic development, and many others developments aren't exist. However, the Government System manages by "economic development" instead of the technological quality of the functioning super-system. Why?

4.1. Any law consists from two parts: exist and words in which this exist is wrap up. According to the needs of the Constitution the content of every law has to help the development of the country. But for it necessary knowledge of the results of the diagnosis of the technological quality of functioning country and in the good time create so law. The legislative organ consists from the lawyers and other specialists of the service intellect, in the majority cases, who has no sufficiently technological knowledge for it. Naturally, majority part of them don't understand what it means the quality of the technology, that country as human-technological system and its monetary circulation have the technologies and efficiency of their functioning is determining by this quality. Defect of the technological knowledge doesn't allow them make diagnosis of this quality to create rank structure of the problems according to their influence for the development of the country. That is why they can't create necessary laws in a good time and usually create laws after arising of the negative events, because the process of management they understand as control arising negative events only. They use technology of the "yesterday of day" sufficiently often. So technology can stop the creation negative processes but can't provide the development country. If they can't have rank structure of the

problems they can't understand that technology of the monetary circulation is very important for the technological quality of the super-system but it is service system in the technology of the country. The management by the "economic development" of the country means process of the management by nothing. Even if they see negative processes they only sometimes can stop of their development. For example, the inflation is going already several decades but persons of the legislative organ can't decide this problem which is an obstacle in the way of the country's development, although it is one of their obligations. They can control only some surface events but can't understand and control events in the technological quality. So surface technology of the management of the main legislative organ created modern condition of the country. Defect of the technological knowledge of this organ is the main source of the degradation of the technological quality of country and its monetary circulation, social stratification of the society, increasing social tension and other negative processes which are trailing the country to the destruction.

If they don't know rank structure of the problems of the country they can't create optimal for the development country system of the actions of the Government and rational using of the budget. Their insufficiently technological competence helped to create problem of the taxes in the country and every political party is trying to decide this problem only for the own interest. They insufficiently understand that in the human-technological system can be only one optimal for the development of country technological system of the taxes but for the creation its necessary use technological knowledge and make technological diagnosis of the quality of using technology. In this case any political party or persons of the Government System will not have even some attitude to the problem of the dynamic taxes, because only condition of the technological quality will determines the indicators of this system. It will already other level of the management by the country, but it needs in the higher level creative intellect of the persons of the Government System.

The quality of technology, according seven technological law [1], needs in the democratic improvement as one of the sources of the development country. The quality of the democracy depends on level of the responsibility of the persons of the Power. If the democracy will work only in one direction from low to high then the country will has enormous losses. For example, even the technology of the election of the President of country needs in the better of the democratic base because detrimental for the development the President plus obsolete technology of the Congress is tragedy for the country.

4.2. The service technology of the legislative organ doesn't allow to know even the condition of the legislative space in the super-system and determine the brake between technological quality of the legislative space and technological quality of the country. According to the needs of the Constitution the technological quality of the legislative space has to be ahead of the technological quality of the country to know its needs and create necessary laws in a good time and provides the development of country. However, if the technological quality of the legislative space has worse quality than technological quality of the super-system than this brake helps by the arising and effective functioning of the juridical businesses which creates nothing for the technological quality of the country. Their quantity and efficiency are one of the indicators of the quality of the using of the legislative organ in human-technological system. Necessary say, that technology of the interaction of the representatives of so businesses and population creates effect that any person has some defect from so interaction almost always and more part of them will not take part in the creation of the election legislative organ of the Power in the different levels. So service technology helps to increasing probability that every member of this organ will have reducer of the votes at the elections and in some time members of so organ already can't say that they are the representatives of all population as the Constitution requires of it. According to the modern condition of the country the legitimation of legislative organs is approaching to the critical position and needs in the improvement already now.

Such way modern condition of the country is result of the using obsolete service technology of the management by the Congress and by the President Power.

In these conditions every Nominee has to have a good think about his level of the mind, creative intellect, force of the character, his abilities to change service technology of the functioning human-technological system today to the creative technology tomorrow and provide the best rates of the development country. It will enormous job because don't all businessman of service intellect can understand that it is only way to their very well future.

Thank you.
